DETAILED ACTION

Specification

1. Claims 120 and 121 have been canceled and new claims 122 and 123 have been added.

Claim Objections

2. Claims 122-123 are objected to because of the following informalities: Markush Group variance (d) is missing from both claims. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 122-123 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In absence of gene variance group (d) in the claims, it is not clear if it is a typo or another type of variance is claimed. The metes and bounds of the claims are vague and indefinite.

Art Unit: 1634

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claim 122 is rejected under 35 U.S.C. 102 (b) as being anticipated by Goyette et al. (Nature Genetics, (1994), Vol. 7, Pages 195-200).

Goyette et al teach a method for selecting a treatment for a patient suffering from a condition or disease, comprising:

determining whether cells of the patient contains at least one variance in the methylenetetrahydrofolate reductase gene, wherein the presence or the absence of the variance in the gene is indicative of the effectiveness of the treatment for the condition of disease, wherein the variance is selected from the variance that causes an C to be present at nucleotide 120 of the mRNA encoded by the methylenetetrahydrofolate reductase gene (Abstract, Figure 1, and Identification of mutations section and Methodology Section, Mutation analysis subsection).

Allowable Subject Matter

7. No prior art rejection has been made against claim 123 in absence of any prior art either teaching or suggesting all elements of the claim.

Art Unit: 1634

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CAR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CAR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
